

CHECKLIST OF GASTROPOD SPECIES REFERRED TO THE ORDER COCCULINIFORMIA HASZPRUNAR, 1987 (GASTROPODA: COCCULINOIDEA ET LEPETELLOIDEA) WITH SOME REMARKS ON THEIR FOOD PREFERENCES

ANDRZEJ LESICKI

Department of Animal Physiology, Institute of Experimental Biology, A. Mickiewicz University,
Fredry 10, 61-701 Poznań, Poland (e-mail: alesicki@main.amu.edu.pl)

ABSTRACT: Cocculiniform limpets live mostly in aphotic zones of deep-sea areas. In this environment, rather poor in organic nutrients, they have specialized in utilizing different odd food sources. The paper presents the list of all species included in the superfamilies Cocculinoidea Dall, 1882 and Lepetelloidea Dall, 1882. Data on their habitat, food preferences and distribution are also included. Adaptive features in cocculiniform limpets that permit them to assimilate organic nutrients of various origin are also discussed. It is suggested that some expanded parts in their alimentary tracts may be used as "fermentative chambers" in which symbiotic bacteria could change the unassimilable food particles into simple compounds absorbed by limpets.

KEY WORDS: limpet, food preferences, alimentary tract adaptations, Cocculiniformia, Cocculinoidea, Lepetelloidea, checklist

INTRODUCTION: COCCULINIFORM LIMPET FAMILIES

Sunlight does not reach bathyal and abyssal zones of seas and oceans, and photosynthesis cannot take place there. Thus, apart from the exceptional animal communities connected with chemoautotrophic primary production near hydrothermal vents and cold seeps (CHILDRESS & FISHER 1992, TUNNICLIFFE 1991), animal life at the sea bottom can be fuelled only by organic particles falling down from the euphotic zone (GOODAY & TURLEY 1990, STOCKTON & DELACA 1982). Such organic falls reaching the deep-sea floor are rather scarce, therefore deep-sea animals often specialize in consuming very odd food. Among such specialized consumers, there is a group of snails, most of them with limpet-shaped shells, which is especially noteworthy. They are included into two superfamilies: Cocculinoidea Dall, 1882(a) and Lepetelloidea Dall, 1882(a). Not long ago were they joined in the order Cocculiniformia Haszprunar,

1987(a), but recently only Cocculinoidea have been retained in Cocculiniformia (BIELER 1992, LINDBERG & PONDER 1991, PONDER & LINDBERG 1997). This superfamily includes the families Cocculinidae Dall, 1882(a) and Bathysciadiidae Dautzenberg et Fischer, 1899. Lepetelloidea (with 8 families: Lepetellidae Dall, 1882(a), Addisoniidae Dall, 1882(a), Bathphytophilidae Moskalev, 1978, Choristellidae Bouchet et Warén, 1979, Cocculinellidae Moskalev, 1971, Osteopeltidae Marshall, 1987, Pseudococculinidae Hickman, 1983 and Pyropeltidae McLean et Haszprunar, 1987) have been shifted to Vetigastropoda Salvini-Plawen, 1980 (PONDER & LINDBERG 1997). This recent change in the taxonomic position of cocculinoid and lepetelloid limpets is recognized, however in this paper they all are called cocculiniform limpets according to the former classification.

FOOD PREFERENCES IN COCCULINIFORM LIMPETS

Cocculinidae and Pseudococculinidae feed on wood which has sunk to the ocean floor (HASZPRUNAR 1988ab, MARSHALL 1986, MOSKALEV 1976, WOLFF 1979). Although it is not excluded that they eat directly wood (maybe due to contamination with symbiotic bacteria which digest cellulose), probably their food consists of different microorganisms which decompose plant remains (MARSHALL 1986). Bathyphytophilidae also eat plants, such as algal holdfasts and seagrass (MOSKALEV 1978, WOLFF 1976). Lepetellidae are found on empty polychaete tubes (DALL 1882a, 1889a, MOSKALEV 1976, 1978, VERRILL 1880). It is again disputable whether the tubes themselves, or microorganisms living on them are the nutrition for lepetellids. Bathysciadiidae feed on chitinous beaks of dead cephalopods (DALL 1908, DAUTZENBERG & FISCHER 1899, MOSKALEV 1973). The same source of food is used by cocculinid *Teuthirostria cancellata* (MOSKALEV 1976) and addisoniid *Helicopelta rostricola* (MARSHALL 1996). Furthermore, Cocculinellidae derive their nutrition from decaying fish bones (HASZPRUNAR 1988c, MARSHALL 1983). On the other hand, whale skeletons have become food for Osteopeltidae (MARSHALL 1987) although some representatives of Cocculinidae (e.g. *Cocculina craigsmithi*) and Pyropeltidae (e. g. *Pyropelta wakefieldi*) may be also found on decaying whale bones and vertebrae (MARSHALL 1994, MCLEAN 1992a). This latter family is included in the hydrothermal vent fauna, i.e. animal communities connected with chemoautotrophic primary production of this unique ecosystem (LESICKI 1998). Addisoniidae and Choristellidae (as well as pseudococculinid *Tentaoculus balantiophaga*) have been found exclusively in empty egg cases of sharks and skates (MARSHALL 1996, MCLEAN 1985, 1992b, VERRILL 1882, VILLA 1985). Two other pseudococculinids of the genus *Tentaoculus* (*T. lithodicola* and *T. neolithodcola*) live on carapaces of living deep-sea crabs of the family Lithodidae (MARSHALL 1986). A bathysciadiid-like limpet feeds on the periostracum of a gastropod of the genus *Capulus* (WARÉN 1993). *Pyropelta bohlei* was also found attached to the shell of *Bathyacmaea jonassoni* (BECK 1996).

The substrata used by cocculinoid and lepetelloid gastropods as sources of their nutrition are built of unassimilable substances. Wood is built of cellulose, cephalopod beaks are composed of chitin. Both are large, filamentous polysaccharides. Egg cases of elasmobranch fish comprise a fibrous protein, collagen. Gastropod periostracum is also built of fibrous proteins. Animals usually do not secrete their own enzymes which could digest such molecules. MARSHALL (1986) suggested that the cocculiniform limpets feed on bacteria which are associated with their biogenic

substrata, rather than directly on the substrata. It is an open question if the cocculiniform limpets consume bacteria free living on the substrata or if they harbour symbiotic bacteria in their alimentary tracts. Although particular families specialize in characteristic nutrition sources, there are some exceptions. *Teuthirostria cancellata* feeds on cephalopod beaks (MOSKALEV 1976) (the other cocculinids feed on wood), so does *Helicopelta rostricola* (MARSHALL 1996) (the other addisoniid limpets prefer elasmobranch egg cases). *Pyropelta corymba* and *P. musaica* probably feed on chemoautotrophic bacteria living on sulphide crust at hydrothermal vents (MCLEAN & HASZPRUNAR 1987) but they have also been collected from whale skulls (MCLEAN 1992a). *Coccopigya spinigera* usually consumes wood, like the other cocculinid limpets, but it was found on a whale skull, too (WARÉN 1991). Another cocculinid limpet, *Paracocculina cervae*, was usually collected from deep-sunken wood or algal holdfasts (HASZPRUNAR 1987a, MARSHALL 1986) but MARSHALL (1994) noted its occurrence on whale bones. Such exceptional cases have led WARÉN (1996b) to a conclusion that many deep-sea limpets can live on a "second choice" substratum when the first is not available. Such a conclusion would be in agreement with the hypothesis that these limpets feed on free living bacteria. However, it seems that the hypothesis of symbiotic bacteria in the alimentary tract of cocculiniform gastropods is more probable. Several authors noted substratum debris observed in the digestive tracts (HASZPRUNAR 1987ab, 1988b, HASZPRUNAR & MCLEAN 1996, SIMONE 1996). The actual consumption of the odd substrata may be also evidenced by the very diverse radular structures in particular families, suggesting adaptive differentiation (HICKMAN 1983) and by differences of the alimentary tract anatomy in these families (HASZPRUNAR 1987ab, 1988abc, 1992ab, HASZPRUNAR & MCLEAN 1996). HASZPRUNAR (1988a) suggested that the alimentary tract of the families feeding on wood, that is Cocculinidae and Pseudococculinidae, represents the most primitive organization. Strongly cuticularized epithelium of some stomach part, creating a so called gastric shield, may be used for mechanical crushing of hard food before it is digested by bacteria in the long intestine coiled in three loops (a long intestine is usually characteristic for plant consumers). The specialization of the other cocculiniform families to other food sources is reflected in serious modifications of their alimentary tracts. Polysaccharide (chitin) consumers, such as bathysciadiids, have a very large stomach but they have lost their midgut gland, which has been replaced with a greatly expanded oesophageal gland. A very large stomach is also characteristic for bathyphytophilids (HASZPRUNAR & MCLEAN 1996). On the other

hand, fibrous protein diet resulted in progressive reduction of the stomach, observed in cocculinellids and addisoniids (members of the latter family have no stomach at all) (HASZPRUNAR 1987b, 1988ac). It appears that, instead of stomach, addisoniid limpets have an extremely large intestinal sac which occupies about two thirds of the animal's body (HASZPRUNAR 1987b). Although Haszprunar initially reported a lack of stomach in choristellids and a similarity of their alimentary tract anatomy to that of addisoniids (HASZPRUNAR 1988a), later he described a very large, highly modified stomach for this family (HASZPRUNAR 1992ab). Nevertheless it may be said that in all cocculiniform gastropods there is some expanded chamber in their alimentary tracts. It is suggested here that such chambers may be used as "fermentative cham-

bers" in which symbiotic bacteria could change the unassimilable food particles into simple compounds absorbed by limpets. However, further physiological studies are desperately needed to explain the details of digestive processes in cocculinoid and lepetelloid gastropods.

MARSHALL (1996) noticed that decaying beaks, egg cases, bones, wood and algal holdfasts are generally rare at the sea-floor. This raises a further unanswered question: how can the limpets find their food? The development of these gastropods is unknown. Their larvae are probably lecithotrophic and may be dispersed by bottom currents (MARSHALL 1986). The chemoreception-based recognition of the food substra may be only speculated upon.

RECENT KNOWLEDGE OF COCCULINIFORM LIMPETS

During the last 25 years our knowledge of the snails of the superfamilies Cocculinoidea and Lepetelloidea has been seriously increased. Studies initiated by MOSKALEV in the seventies (1971, 1973, 1976, 1978) and continued in the eighties and nineties by HASZPRUNAR (1987ab, 1988abc, 1992ab, 1996), MARSHALL (1983, 1986, 1987, 1994, 1996), MCLEAN (1985, 1988, 1991, 1992ab) and WARÉN (1989, 1991, 1993, 1996ab) have brought not only the discovery and description of several new species. As a result of the detailed comparative anatomical studies, they have revealed relationships between them. It has also been possible to revise descriptions of earlier discovered species as well as to improve the system introduced on the turn of the 19th century (DALL 1882ab, 1889ab, 1896, DAUTZENBERG 1886, 1889, THIELE 1908, 1909, 1925, 1929, VERRILL 1880, 1882, 1884). The recent discoveries throw some new light on the problems of the gastropod origin, specially on the role of limpet-shelled forms in the gastropod evol-

ution (HASZPRUNAR 1988ab, 1992ab, HASZPRUNAR & MCLEAN 1996, HICKMAN 1983, MARSHALL 1996). The papers published during the last three years (BECK 1996, HASEGAWA 1997, HASZPRUNAR & MCLEAN 1996, LEAL 1996, MARSHALL 1996, MCLEAN & HARASEWYCH 1995, SIMONE 1996, WARÉN 1996ab) contain descriptions of 17 new species (further 8 have been presented but not named yet), redescription and reclassification of another 22 species, establishment of a new genus and a new subfamily. Descriptions of further species are being prepared (MARSHALL, LEAL, MCLEAN – personal communication). This is a proof that this gastropod group still inspires new research. Therefore it seems reasonable to compile in one paper all information on the species included in the superfamilies Cocculinoidea and Lepetelloidea, as well as all data on their habitat, food preferences and distribution areas. The checklist should also give a detailed bibliography of both superfamilies.

CHECKLIST OF COCCULINIFORM LIMPET SPECIES

Superfamily: Cocculinoidea Dall, 1882(a)
(Thiele, 1909 emend.)

Family: COCCULINIDAE Dall, 1882(a)

Genus: *Cocculina* Dall, 1882(a)

(type species: *Cocculina rathbuni* Dall, 1882)

Several species have been referred to the genus *Cocculina* Dall, 1882(a), however their generic (and family) status has not been recently confirmed by the studies on their anatomies and radulae, these species are listed as "*Cocculina*".

Cocculina angulata Watson, 1886
(western Pacific: Philippines)
(MCLEAN & HARASEWYCH 1995)

"*Cocculina*" *alta* Smith, 1894
(southwest Pacific: off New South Wales, 750 m)

"*Cocculina*" *alveolata* Schepman, 1908
(Indo-Pacific)

Cocculina baxteri McLean, 1987
(northeastern Pacific: Prince William Sound,
Alaska; 424–430 m; on wood)
(HASZPRUNAR 1987a)

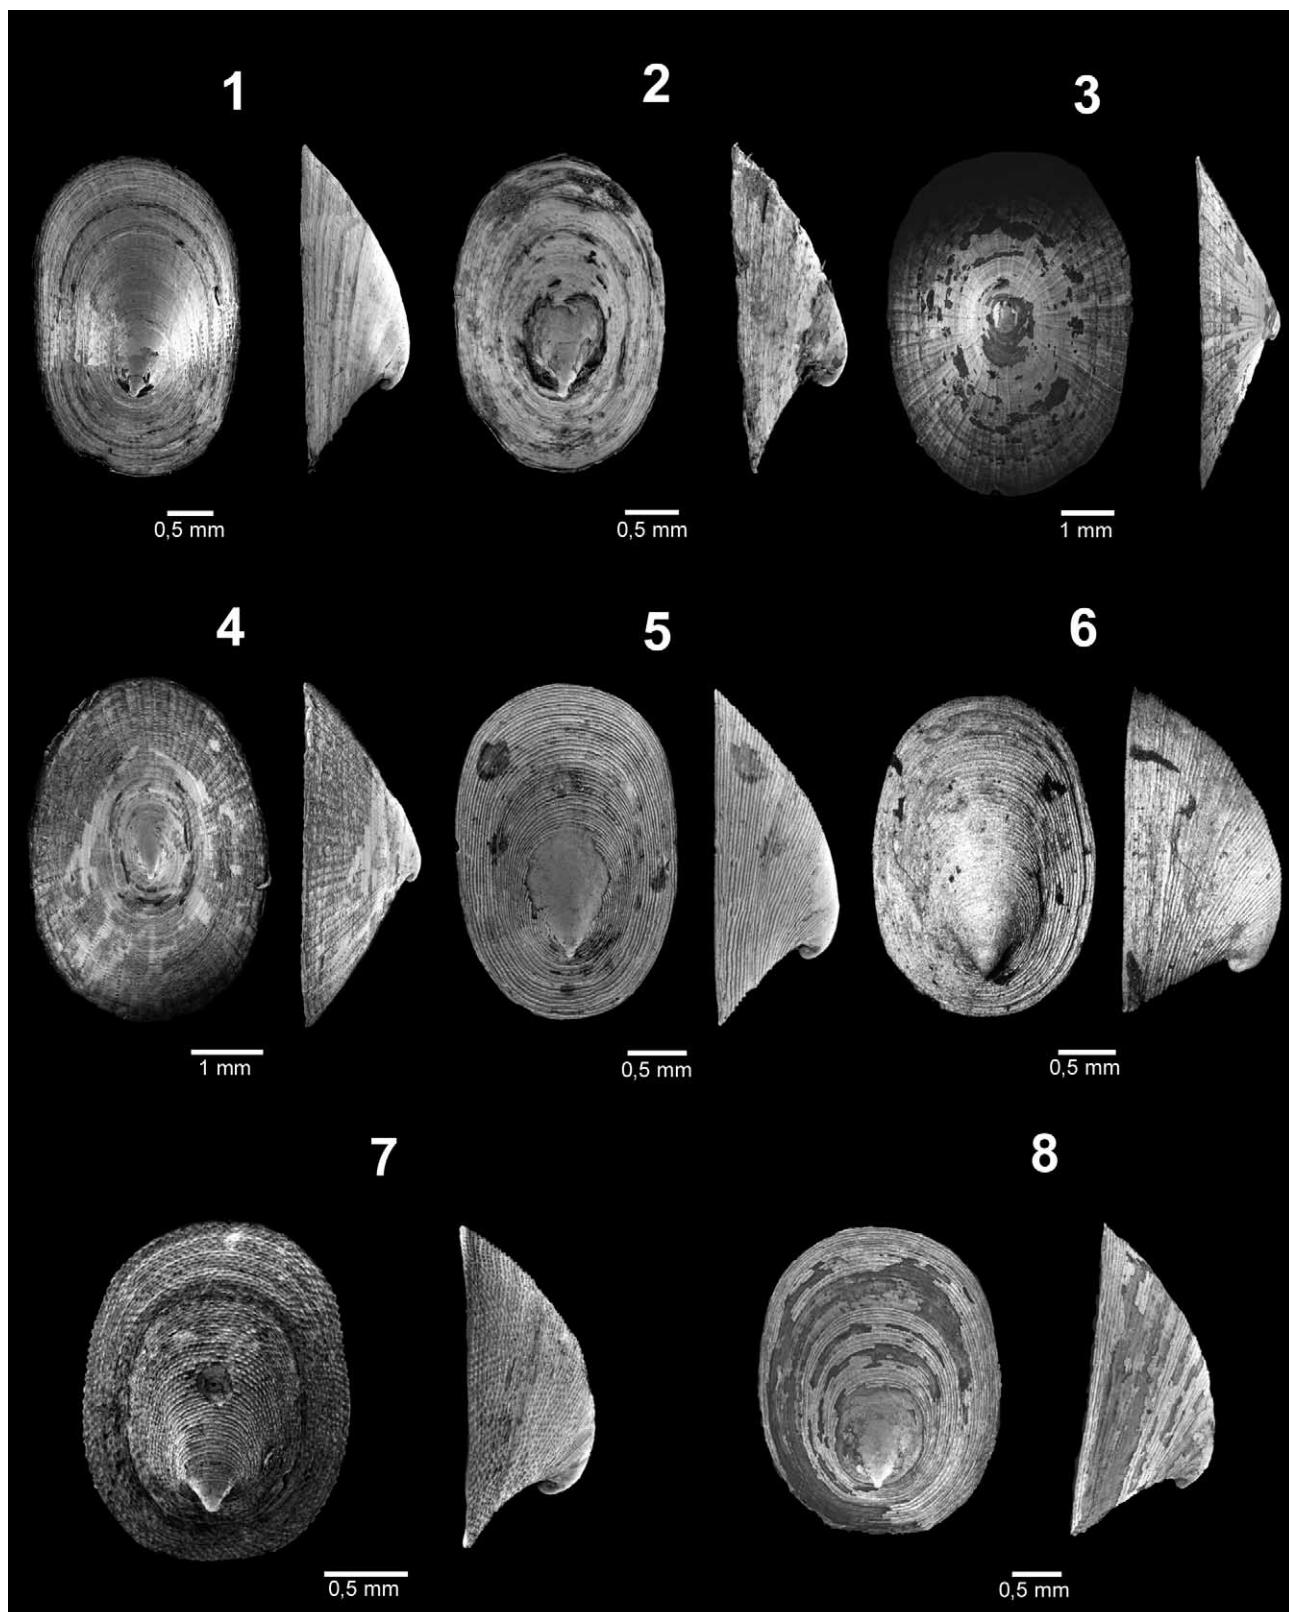

Fig. 1–8. Shells of cocculiniform limpets. Cocculinidae: 1 – *Cocculina surugaensis* Hasegawa, 1997; 2 – *Cocculina tenuitestata* Hasegawa, 1997; 3 – *Coccopigya okutanii* Hasegawa, 1997; 4 – *Coccopigya punctoradiata* (Kuroda et Habe, 1949); Pseudococculinidae: 5, 6 – *Pseudococculina subcingulata* (Kuroda et Habe, 1949); 7 – *Notocrater pustulosa* (Thiele, 1925); 8 – *Copulabyssia similaris* Hasegawa, 1997. Scale bars: 500 µm (1, 2, 5–8) or 1 mm (3, 4). Published by the courtesy of KAZUNORI HASEGAWA (National Science Museum, Tsukuba, Japan) after HASEGAWA (1997)

- (northeastern Pacific: Queen Charlotte Sound, Vancouver Isl., British Columbia; 265 m)
(DALL 1921, MCLEAN 1987)
- Cocculina cowani* McLean, 1987
(northeastern Pacific: off Moresby Isl., Queen Charlotte Islands, British Columbia; 1370 m; on wood)
(HASZPRUNAR 1987a)
- Cocculina craigsmithi* McLean, 1992(a)
(northeastern Pacific: Santa Catalina Basin between Santa Catalina Isl. and San Clemente Isl.; 1240 m; on whale bones)
- “*Cocculina*” *diomedae* Dall, 1908
(east Pacific: off West America)
- “*Cocculina*” *dofleini* Thiele, 1925
(Indo-Pacific)
- Cocculina emsoni* McLean et Harasewych, 1995
(northwestern Atlantic: off Southwest Reef, New Providence Island, Bahamas; 518 m; on palmetto fronds)
- “*Cocculina*” *fragilis* Thiele, 1925
(western Indian Ocean: Zanzibar Channel, E. Africa)
- “*Cocculina*” *japonica* Dall, 1908
(northwestern Pacific: off Japan)
- “*Cocculina*” *japonica uncinata* Kuroda et Habe, 1949
(northwestern Pacific: off Japan)
- “*Cocculina*” *leptoglypta* Dautzenberg et Fischer, 1897
(Atlantic: off Azores; 1550 m)
(DANTART & LUQUE 1994)
- Cocculina messangi* McLean et Harasewych, 1995
(northwestern Atlantic: south of Settlement Point, Grand Bahama Island; 412 m; on wood)
- “*Cocculina*” *nassa* Dall, 1908
(equatorial eastern Pacific)
- “*Cocculina*” *oblonga* Schepman, 1908
(Indo-Pacific)
- Cocculina ovata* Schepman, 1908
(Indo-Pacific: Saleh Bay, north coast of Sumbawa Island, Indonesia; 274 m; Philippines; 187–210 m)
(HASZPRUNAR 1987a, MCLEAN 1987)
- “*Cocculina*” *pacifica* Kuroda et Habe, 1949
(northwestern Pacific: off Japan)
- Cocculina* sp. cf. *pacifica* Kuroda et Habe, 1949 (HASEGAWA 1997)
(northwestern Pacific: Suruga Bay, Honshu, Japan, 180–680 m; on wood)
- Cocculina pristina* Marshall, 1986
(Otaian, early Miocene, 1.6 km NW of Pakaurangi Point, Kaipara, New Zealand)
- Cocculina rathbuni* Dall, 1882(a)
(western Atlantic: Massachusetts, Barbados, Martinique; 730–919 m)
(264 km SE off Martha’s Vineyard Isl.; 925 m; off Ford Pierce, Florida, 124 m)
(HASZPRUNAR 1987a, MCLEAN 1987)
- (off Southwest Reef, New Providence Island Bahamas; 518 m; on palmetto fronds)
(MCLEAN & HARASEWYCH 1995)
- “*Cocculina*” *striata* Schepman, 1908
(Indo-Pacific)
- “*Cocculina*” *subcompressa* Schepman, 1908
=? “*Cocculina*” *nipponica* Kuroda et Habe, 1949
(northwestern Pacific: off Japan)
- “*Cocculina*” *subquadrata* Schepman, 1908
(Indo-Pacific)
- Cocculina surugaensis* Hasegawa, 1997 (Fig. 1)
(northwestern Pacific: Suruga Bay, Honshu, Japan, 345–920 m; Sagami Bay, Honshu, Japan, 750–870 m; on wood)
- Cocculina tenuitestra* Hasegawa, 1997 (Fig. 2)
(northwestern Pacific: Suruga Bay, Honshu, Japan, 275–500 m; on wood)
- Cocculina* n. sp. (1) (MOSKALEV 1976)
- Cocculina* n. sp. (2) (HASEGAWA 1997)
(northwestern Pacific: Suruga Bay, Honshu, Japan, 180–710 m; on wood)
- Genus: *Coccocrater* Haszprunar, 1987(a)
(type species: *Cocculina radiata* Thiele, 1904)
- Coccocrater agassizii* (Dall, 1908) (*Cocculina*)
(eastern Pacific: Gulf of Panama; 1015 m)
(HASZPRUNAR 1987a, MCLEAN 1987)
- Coccocrater pocillum* (Dall, 1890) (*Cocculina* / *Coccopygia* /)
(western Atlantic: off Tobago; 1600 m)
(MCLEAN & HARASEWYCH 1995)
- Coccocrater portoricensis* (Dall et Simpson, 1901) (*Cocculina*)
(western Atlantic: off San Juan Harbor, Porto Rico; 566 m)
(MCLEAN & HARASEWYCH 1995)
- Coccocrater radiata* (Thiele, 1904) (*Cocculina*)
(eastern Indian Ocean: off Sumatra; 614 m)
(HASZPRUNAR 1987a)
- Genus: *Coccopigya* Marshall, 1986
(nomen novum pro *Coccopygia* Dall, 1889/a/)
(type species: *Cocculina spinigera* Jeffreys, 1883)
- Coccopigya barbatula* Marshall, 1986
(southwestern Pacific: off New South Wales; 384–457 m; on wood)
- Coccopigya compunctum* (Marwick, 1931) (*Tectisumen*)
(early or middle Miocene, NE of Tekaraka, Gisborne District, New Zealand)
(MARSHALL 1986)
- Coccopigya crebrilamina* Marshall, 1986
(southwestern Pacific: Whale Island to Tetara Head, New Zealand; 55–146 m; on large log)
- Coccopigya crinita* Marshall, 1986
(southwestern Pacific: New Zealand; New South Wales; 203–914 m; on wood)
- Coccopigya hispida* Marshall, 1986
(southwestern Pacific: White Island to off Timaru, New Zealand; 833–1514 m; on wood)
(HASZPRUNAR 1987a)

- Coccopigya komitica* Marshall, 1986
 (Otaian, early Miocene, 1.6 km NW of Pakaurangi Point, Kaipara, New Zealand)
- Coccopigya lata* Warén, 1996(a)
 (north Atlantic: off southwestern Iceland; on sunken driftwood)
- Coccopigya mikkelsenae* McLean et Harasewych, 1995
 (western Atlantic: off Chateau Belair Bay, St. Vincent, Lesser Antilles; 421 m; on wood)
- Coccopigya oculifera* Marshall, 1986
 (southwestern Pacific: White Island to off Timaru, New Zealand; 248–962 m; on wood)
- Coccopigya okutanii* Hasegawa, 1997 (Fig. 3)
 (northwestern Pacific: Suruga Bay, Honshu, Japan; 205–740 m; on wood)
- Coccopigya otaiana* Marshall, 1986
 (Otaian, early Miocene, 1.6 km NW of Pakaurangi Point, Kaipara, New Zealand)
- Coccopigya punctoradiata* (Kuroda et Habe, 1949) (*Cocculina*) (Fig. 4)
 (northwestern Pacific: off Tosa, Shikoku; Suruga Bay, Honshu; 120–1708 m; on wood) (HASEGAWA 1997)
- Coccopigya spinigera* (Jeffreys, 1883/c/) (*Cocculina*)
 = *Cocculina conspersa* Dautzenberg et Fischer, 1897
 (northwestern Atlantic: off the northeastern United States to western and southern Iceland, and to north of the Hebrides; also Mediterranean: between Catalonia and Mallorca, and Chafarinas Island, N. Morocco; 200–1534 m; on submersed wood and whale skeletons, also on tubes of xylophagid and teredinid ship-worms) (DALL 1889a; DANTART & LUQUE 1994; MCLEAN & HARASEWYCH 1995; WARÉN 1991)
- Coccopigya viminensis* (Rocchini, 1990) (*Cocculina*)
 (Mediterranean: between Barcelona, Tarragona and Mallorca, Tusean Archipelago; 450–1883 m; on wood) (DANTART & LUQUE 1994)
- Coccopigya* sp. (HASEGAWA 1997)
 (northwestern Pacific: Suruga Bay, Honshu, Japan; 180–680 m; on wood)
- Genus: *Fedikovella* Moskalev, 1976 (type species:
Fedikovella caymanensis Moskalev, 1976)
- Fedikovella beanii* (Dall, 1882/a/) (*Cocculina*)
 (northwestern Atlantic: Martha's Vineyar Island, Massachusetts; Martinique; 183–1846 m)
 (off Chateau Belair Bay, St. Vincent, Lesser Antilles; 421 m; on wood) (MCLEAN & HARASEWYCH 1995, MOSKALEV 1976)
- Fedikovella capulus* (Thiele, 1925) (*Cocculina*)
 (western Indian Ocean: Zanzibar Channel; 463 m)
 doubtfully included in *Fedikovella* (MCLEAN & HARASEWYCH 1995, MOSKALEV 1976)
- Fedikovella caymanensis* Moskalev, 1976
 (western Atlantic: Cayman Trench; 6740–6800 m; on sunken wood) (MCLEAN & HARASEWYCH 1995)
- (western Atlantic: Puerto Rico Trench; 8595 m) (LEAL 1996)
- Fedikovella* n. sp. (1) (MOSKALEV 1976)
 (western Atlantic: off Puerto Rico; 7950–8100 m)
- Fedikovella* n. sp. (2) (MOSKALEV 1976)
 (western Atlantic: off Puerto Rico; 7950–8100 m)
- Fedikovella* n. sp. (3) (MOSKALEV 1976)
 (western Atlantic: off Puerto Rico; 8330 m)
- Genus: *Paracocculina* Haszprunar, 1987(a)
 (type species: *Cocculina laevis* Thiele, 1904)
- Paracocculina cervae* (Fleming, 1948) (*Cocculina*)
 (southwestern Pacific: North Cape to Long Sound, New Zealand; 18–891 m; on whale bones, algal holdfast, deep-sunken wood) (HASZPRUNAR 1987a, MARSHALL 1986, 1994)
- Paracocculina laevis* (Thiele, 1904) (*Cocculina*)
 (eastern Indian Ocean: off Nias Island, Sumatra) (HASZPRUNAR 1987a)
- Genus: *Teuthirostria* Moskalev, 1976
 (type species: *Teuthirostria cancellata* Moskalev, 1976)
- Teuthirostria cancellata* Moskalev, 1976
 (eastern Pacific: off Peru; 5200–5540 m; on cephalopod beaks)
- Gen. n., sp. n. (LEAL 1996)
 (western Atlantic: Puerto Rico Trench; 8595 m)
- Family: BATHYSCIADIIDAE Dautzenberg et Fischer, 1899
- Genus: *Bathysciadium* Dautzenberg and Fischer, 1899
 (type species: *Bathysciadium conicum* Dautzenberg et Fischer, 1899)
 = *Bathypelta* Moskalev, 1971 (? Family: Bathypeltidae Moskalev, 1971; Superfamily: Bathypeltoidea Moskalev, 1971) (type species: *Bathysciadium pacificum* Dall, 1908) (WARÉN 1996b)
 = *Bonus* Moskalev, 1973
 (type species: *Bonus petrochenkoi* Moskalev, 1973) (WARÉN 1996b)
- Bathysciadium concentricum* Dall, 1927
 (northwestern Atlantic: off Georgia; 800 m)
- Bathysciadium costulatum* (Locard, 1897) (*Lepeta*)
 (Atlantic: south of the Azores; 3175 m; on a cephalopod jaw)
 = *Bathysciadium conicum* Dautzenberg et Fischer, 1899
 (Atlantic: off Azores, off Spanish Sahara; 1000–2000 m; on cephalopod beaks) (PELSENEER 1899, 1940; WARÉN 1996b)
- Bathysciadium pacificum* Dall, 1908
 (eastern Pacific: off Peru; 4115 m; on cephalopod beaks) (WARÉN 1996b)
- Bathysciadium petrochenkoi* (Moskalev, 1973) (*Bonus*)

(northwestern Pacific: Kurile-Kamchatka Trench; 9130–9430 m) (WARÉN 1996b)

Bathysciadium rotunda (Dall, 1927) (*Cocculina*)
(northwestern Atlantic: off Fernandina, Florida)
(tentatively referred to *Bathysciadium* by MCLEAN & HARASEWYCH 1995)

Bathysciadium xylophagum Warén et Carrozza, 1996 (in WARÉN 1996b)
(Mediterranean: off Sardinia; 630 m; in holes made by ship-worms in a piece of sunken wood)

Bathysciadium sp. cf. *xylophagum* Warén et Carrozza, 1996 (WARÉN 1996b)
(Atlantic: off southwestern Portugal, Josephine Bank; 200 m; on a cephalopod beak)

Bathysciadium n. sp. (1) (HASZPRUNAR 1988a)
(southwestern Pacific: off New Zealand)

Bathysciadium n. sp. (2) (HASZPRUNAR 1988a)
(southwestern Pacific: off New Zealand)

Bathysciadium n. sp. (3) (WARÉN 1996b)
(southwestern Indian Ocean: off Reunion Island; 2830–2850 m)

Bathysciadium n. sp. (4) (WARÉN 1996b)
(Mediterranean: off Capraia Island; 150 m)

Genus: *Pilus* Warén, 1991 (tentatively placed in the Bathysciadiidae by WARÉN 1993)
(type species: *Cocculina conica* Verrill, 1884)

Pilus conica (Verrill, 1884) (*Cocculina*)
(northwestern Atlantic: northeastern coasts of United States and southwestern coasts of Iceland; 900–1000 m)
(MCLEAN & HARASEWYCH 1995; WARÉN 1993)

Genus: *Xenodonta* Warén, 1993
(tentatively placed in the Bathysciadiidae)
(type species: *Xenodonta bogasoni* Warén, 1993)

Xenodonta bogasoni Warén, 1993
(north Atlantic: off western and southwestern Iceland; 260–770 m)

Xenodonta n. sp. (WARÉN 1993)
(eastern Pacific: off Galapagos Islands; on the shell periostracum of *Capulus* sp.)

species excluded from *Cocculinoidea* Dall, 1882(a)

Acmaea parva var. *tasmanica* Pilsbry, 1895
= *Cocculina meridionalis* Hedley, 1903
= *Acmaea excentrica* Test, 1945
sometimes referred in *Cocculina* or *Notocrater* belongs to *Propilidium* Forbes et Hanley, 1849, Lepetidae Dall, 1869 (MARSHALL 1986)

Cocculina aethiopica Thiele, 1925
is a basal plate of a barnacle – Crustacea: Cirripedia (WARÉN 1985)

Cocculina casanica Dall, 1919
is a junior synonym of *Lepeta caeca* (Müller, 1776) and belongs to Lepetidae Dall, 1869 (MCLEAN 1987)

Cocculina dalli Verrill, 1884
close to *Iothia rugosa* (Jeffreys, 1883/b/) Lepetidae Dall, 1869 (MCLEAN & HARASEWYCH 1995)

Cocculina lisocona Dall, 1927
referred to *Propilidium* Forbes et Hanley, 1849, Lepetidae Dall, 1869 (MCLEAN & HARASEWYCH 1995)

Cocculina maxima Dautzenberg, 1925
belongs to patellogastropod genus *Pectinodonta* Dall, 1882(a) (MARSHALL 1985)

Cocculina obtusa Thiele, 1925
probably belongs to patellogastropod genus *Pectinodonta* Dall, 1882(a) (MARSHALL 1985)

Cocculina petasus Thiele, 1925
is a basal plate of a barnacle – Crustacea: Cirripedia (WARÉN 1985)

Cocculina reticulata Verrill, 1885
referred to *Propilidium* Forbes et Hanley, 1849, Lepetidae Dall, 1869 (MCLEAN & HARASEWYCH 1995)

Cocculina rhyssa Dall, 1925
belongs to patellogastropod genus *Pectinodonta* Dall, 1882(a) (HASEGAWA 1997, MARSHALL 1985)

Cocculina scabra Kuroda et Habe, 1949
referred to *Iothia* Forbes, 1849, Lepetidae Dall, 1869 (HASEGAWA 1997, INABA & OYAMA 1977)

Cocculina superba Clarke, 1960
referred to Lepetidae Dall, 1869 (MCLEAN & HARASEWYCH 1995)

Cocculina teramachii Kuroda et Habe, 1949
referred to *Iothia* Forbes, 1849, Lepetidae Dall, 1869 (HASEGAWA 1997, INABA & OYAMA 1977)

Genus: *Dallia* Jeffreys, 1883 (a) (type species: *Tectura (Dallia) galeola* Jeffreys, 1883/a/) with the species: *D. galeola* (Jeffreys, 1883/a/), *D. pusilla* (Jeffreys, 1883/a/) and *D. adunca* (Jeffreys, 1883/a/) probably belongs to Lepetidae Dall, 1869 (MARSHALL 1986) but their specific, generic and familiar status is unclear (DANTART & LUQUE 1994)

Genus: *Maoricrater* Dell, 1956 (type species: *Notoacmea explorata* Dell, 1953) belongs to Lepetidae Dall, 1869 (HICKMAN 1983, MOSKALEV 1977)

Genus: *Propilidium* Forbes et Hanley, 1849 (type species: *Patella ancyloides* Forbes, 1840) belongs to Lepetidae Dall, 1869 (DANTART & LUQUE 1994, MARSHALL 1986)

Superfamily: L e p e t e l l o i d e a Dall, 1882(a) (Thiele, 1908 emend.)

Family: LEPETELLIDAE Dall, 1882(a)

Genus: *Lepetella* Verrill, 1880 (type species: *Lepetella tubicola* Verrill et Smith in Verrill, 1880)
Lepetella barrajoni Dantart et Luque, 1994

- (Atlantic: off Iberian Peninsula, 82–86 m; on polychaete *Hyalinoecia tubicola* tubes)
- Lepetella espinosae* Dantart et Luque, 1994
?= *Lepetella laterocompressa* auct. non *Patella laterocompressa* De Rayneval et Ponzi, 1854 (partim)
(Mediterranean: off Iberian Peninsula, off Capraia Island (Italy); 58–272 m; on polychaete *Hyalinoecia tubicola* tubes)
- Lepetella ionica* Nordsieck, 1973
= *Cocculina mamilla* Di Geronimo, 1974
(Mediterranean: Ionian Sea; off Sardinia; off Iberian Peninsula between Catalonia and Mallorca; 900–4210 m) (DANTART & LUQUE 1994, JANSSEN 1989)
- Lepetella laterocompressa* (De Rayneval et Ponzi, 1854)
(*Patella*)
(Pleistocene, Monte Mario, Italy)
?= *Gadinia compressa* Tiberi in Jeffreys, 1883(a)
(recent, Mediterranean: off Palermo) (MONTEROSATO 1890)
?= *Lepetella tubicola* Jeffreys, 1883(a)
?= *Patella tricornis* Turton, 1821
(recent, Mediterranean: Bay of Naples; North Sea: off Norway, 30–60 m) (WARÉN 1972)
?= *Cocculina clipeus* Thiele, 1925
(off Cape Bojador, W. Africa) (WARÉN 1972) may be a distinct *Lepetella* species (DANTART & LUQUE 1994)
?= *Propilidium aquitanense* Locard, 1886
(Gulf of Biscay) may be a distinct *Lepetella* species (DANTART & LUQUE 1994)
(according to DANTART & LUQUE (1994) name *L. laterocompressa* should be restricted to the fossil species, recent Mediterranean specimens, identified as *L. laterocompressa*, probably were in fact *L. espinosae* or *L. sierrai*; status of North Sea specimens is unclear)
- Lepetella postapicula* Dell, 1990
(Antarctica)
- Lepetella sierrai* Dantart et Luque, 1994
?= *Lepetella laterocompressa* auct. non *Patella laterocompressa* De Rayneval et Ponzi, 1854 (partim)
(eastern Atlantic: Bay of Biscay, 116–120 m; on empty polychaete *Hyalinoecia tubicola* tubes)
- Lepetella tosaensis* (Kuroda et Habe, 1949) (*Cocculina*)
(northwestern Pacific: off Japan)
tentatively attributed to *Lepetella* Verrill, 1880 (HASEGAWA 1997)
- Lepetella tubicola* Verrill in Verrill, 1880
(northwestern Atlantic: off New England; on polychaete *Hyalinoecia* tubes, 351–651 m) (DALL 1882ab, 1889a, HICKMAN 1983, MOSKALEV 1978)
- Lepetella* n. sp. (?) (DANTART & LUQUE 1994)
(eastern Atlantic: Bisagos Archipelago, Guinea-Bissau, W. Africa; 216–378 m)

- Genus: *Bogia* Dantart et Luque, 1994
(type species: *Cocculina labronica* Bogi, 1984)
(family uncertain, should be excluded from Leptellidae according to DANTART & LUQUE 1994)
Bogia labronica (Bogi, 1984) (*Cocculina*)
(Mediterranean: Tyrrhenian Sea; 80–220 m)
- Genus: *Sablea* Allen, 1970
(type species: *Sablea minuta* Allen, 1970)
Sablea minuta Allen, 1970
(Eocene-Oligocene)
conchologically similar to *Lepetella* Verrill, 1880 (DANTART & LUQUE 1994; STEARNS & DOCKERY 1984)
- Genus: *Tectisumen* Finlay, 1927 (type species: *Cocculina clypidellaformis* Suter, 1908) (synonymised with *Lepetella* Verrill, 1880 by WARÉN (1972) and HICKMAN (1983) but not by HASZPRUNAR (1988a))
Tectisumen clypidellaformis (Suter, 1908) (*Cocculina*)
(southwestern Pacific: deep water off New Zealand, on polychaete *Hyalinoecia tubes*) (DELL 1956, MOSKALEV 1978)
Tectisumen compunctum (Fleming, 1966) (*Lepetella* /*Tectisumen*/)
(Cenozoic, New Zealand) (MOSKALEV 1978)
Tectisumen mayi Finlay, 1927
(southwestern Pacific: off New Zealand)
(MOSKALEV 1978)
Tectisumen parallela (Fleming, 1966) (*Lepetella* /*Tectisumen*/)
(Cenozoic, New Zealand) (MOSKALEV 1978)
Tectisumen tasmanica (May, 1920)
(southwestern Pacific: off Australia)
- Genus: *Tecticrater* Dell, 1956 (type species: *Cocculina compressa* Suter, 1908) (synonymised with *Lepetella* Verrill, 1880 by WARÉN (1972) and HICKMAN (1983) but not by HASZPRUNAR (1988a))
Tecticrater compressa (Suter, 1908) (*Cocculina*)
= *Tectisumen subcompressa* Powell, 1937
= *Tectisumen finlayi* Powell, 1937
(southwestern Pacific: off New Zealand; 260 m) (DELL 1956, MOSKALEV 1978)
“*Tecticrater*” *grandis* Crozier, 1966
(southwestern Pacific: off New Zealand)
this species should be probably referred to Lepetidae Dall, 1869 (MARSHALL, personal information)
- Gen. nov. Warén in prep. (HASZPRUNAR 1988a)
- Family: ADDISONIIDAE Dall, 1882(a)
- Subfamily: Addisoniinae Dall, 1882(a)
- Genus: *Addisonia* Dall, 1882(a)
(type species: *Addisonia paradoxa* Dall, 1882)
Addisonia brophyi McLean, 1985

(northeastern Pacific: Santa Barbara Basin to Santa Catalina Basins; 155–174 m; in shark egg cases)

Addisonia enodis Simone, 1996

(southwestern Atlantic: off Ubatuba, São Paulo St. Brazil, 184 m)

Addisonia excentrica (Tiberi, 1855) (*Gadinia*)

= *Addisonia lateralis* auct., non *Gadinia lateralis* Réquier, 1848

= *Addisonia ecentros* Jeffreys, 1883(a)

(Mediterranean: Sicily to Corsica; Eastern Atlantic: Bay of Biscay to Guinea Bissau)

(DAUTZENBERG 1886, 1889, GUBBIOLI & NOFRONI 1986, HASZPRUNAR 1987b, LOCARD 1897, MCLEAN 1985, TIBERI 1857, VILLA 1985)

= *Addisonia paradoxa* Dall, 1882(a)

(western Atlantic: Nova Scotia to Jamaica; in empty egg cases of sharks and skates)

(DALL 1882bc, 1889b, MCLEAN 1985, DANTART & LUQUE 1994, WARÉN 1996b)

Subfamily: Helicopeltinae Marshall, 1996

Genus: *Helicopelta* Marshall, 1996

(type species: *Helicopelta rostricola* Marshall, 1996)

Helicopelta rostricola Marshall, 1996

(southwestern Pacific: Chesterfield Plateau, Coral Sea; 685–700 m; on a detrital cephalopod beak)

Helicopelta n. sp. (MARSHALL 1996)

(southwestern Pacific: southeast of New Caledonia; 750 m; on a detrital cephalopod beak)

species excluded from Addisoniidae Dall, 1882(a)

Gadinia lateralis Réquier, 1848

is a junior synonym of *Trimusculus mammilaris* (Linnaeus, 1758) (Pulmonata)
(DANTART & LUQUE 1994, WARÉN 1996b)

Family: BATHYPHYTOPHILIDAE Moskalev, 1978

Genus: *Bathyphytophilus* Moskalev, 1978 (type species: *Bathyphytophilus caribaeus* Moskalev, 1978)

Bathyphytophilus caribaeus Moskalev, 1978

(western Atlantic: Cayman Trench; 5800–6500 m; on turtlegrass *Thalassia testudinum*)

Bathyphytophilus diegensis Haszprunar et McLean, 1996

(northeastern Pacific: San Diego Trough; 1224 m; on surfgrass *Phyllospadix scouleri*)

Bathyphytophilus n. sp. (HASZPRUNAR & MCLEAN 1996)

(northeastern Pacific: San Diego Trough; 1207–1234 m; on surfgrass *Phyllospadix torreyi*)

Genus: *Aenigmabonus* Moskalev, 1978 (type species:

Aenigmabonus kurilokamtschaticus Moskalev, 1978)

Aenigmabonus kurilokamtschaticus Moskalev, 1978

(northwestern Pacific: Kurile-Kamchatka Trench; 6120–6160 m)

Family: CHORISTELLIDAE Bouchet et Warén, 1979
= CHORISTIDAE auct.

Genus: *Bichoristes* McLean, 1992(b)

(type species: *Bichoristes wareni* McLean, 1992)

Bichoristes wareni McLean, 1992(b)

(southwestern Pacific: Norfolk Ridge, south of New Caledonia; 505–515 m)

Genus: *Choristella* Bush, 1897 (type species: *Choristella leptalea* Bush, 1897)

Choristella hickmanae McLean, 1992(b)

(northeastern Pacific: Northern Cascadia Abyssal Plain, Strait of Juan de Fuca; 2176 m)
(HASZPRUNAR 1992b)

Choristella leptalea Bush, 1897

= *Choristella brychia* Bush, 1897 (MCLEAN 1992b)
(northwestern Atlantic: off Martha's Vineyard Island, Massachusetts; 713–1481 m)

Choristella marshalli McLean, 1992(b)

(southwestern Pacific: off New Zealand; 376–1116 m; in empty skate egg case) (HASZPRUNAR 1992b)

Choristella nofronii McLean, 1992(b)

= *Cintha naticiformis* auct., non *Cintha naticiformis* Jeffreys, 1883(b)
(Alboran Sea, westernmost Mediterranean near Spain; 50–100 m; in *Raia* egg cases)
(GUBBIOLI & NOFRONI 1986, HASZPRUNAR 1992b)

Choristella ponderi McLean, 1992(b)

(southwestern Pacific: off Australia; 91–552 m; in skate egg case)

Choristella tenera (Verrill, 1882) (*Choristes*)

(northwestern Atlantic: off Martha's Vineyard Island, Massachusetts and off Cape Hatteras, North Carolina; 353–580 m; inside an old egg-case of skate *Raia*) (MCLEAN 1992b)

Choristella vitrea (Kuroda et Habe in Kuroda et al., 1971) (*Choristes*)

(northwestern Pacific: Sagami Bay, Japan; on egg capsules of shark) (MCLEAN 1992b)

Choristella n. sp. (1) (MCLEAN 1992b)

(southwestern Indian Ocean: Mozambique Channel; 3716 m)

Choristella n. sp. (2) (MCLEAN 1992b)

(southwestern Pacific: Norfolk Ridge; 503 m)

Choristella n. sp. (3) (MCLEAN 1992b)

(Indo-Pacific: Banda Sea, off Tanimbar Island, Indonesia; 356–368 m)

Choristella n. sp. (4) (MCLEAN 1992b)

(Indo-Pacific: Arafura Sea, off Kai Islands, Indonesia; 390–502 m)

species excluded from Choristellidae Bouchet et Warén, 1979

Choristes agulhasae Clarke, 1961

- probably in *Trenchia* Knudsen, 1964, Skeneidae
Clark, 1851 (MCLEAN 1992b)
- Choristes agulhasae argentiniae* Clarke, 1961
probably in *Trenchia* Knudsen, 1964, Skeneidae
Clark, 1851 (MCLEAN 1992b)
- Choristes carpenteri* Dall, 1896
should be placed in Naticidae Forbes, 1838
(MCLEAN 1992b)
- Choristes coani* Marincovich, 1975
should be placed in Naticidae Forbes, 1838
(MCLEAN 1992b)
- Choristes elegans* Carpenter in Dawson, 1872
is synonym of naticid *Amauroopsis islandica* (Gmelin,
1791) (MCLEAN 1992b)
- Choristes mollis* Okutani, 1964
probably in *Granigryra* Dall, 1889, Skeneidae Clark,
1851 (MCLEAN 1992b)
- Choristes nipponica* Okutani, 1964
should be excluded from Choristellidae (MCLEAN
1992b)
- Cintha naticiformis* Jeffreys, 1883(b)
probably in *Trenchia* Knudsen, 1964, Skeneidae
Clark, 1851 (MCLEAN 1992b)
recently to *Xyloskenea* Marshall, 1988, Skeneidae
Clark, 1851 (WARÉN 1996a)
- Cyclostrema pompholyx* Dall, 1889(a)
should be not referred to Choristellidae (MCLEAN
1992b)
- Cyclostrema valvataoides* Jeffreys, 1883(b)
probably in Skeneidae Clark, 1851 (MCLEAN
1992b)

Family: COCCULINELLIDAE Moskalev, 1971

- Genus: *Cocculinella* Thiele, 1909
(type species: *Acmaea minutissima* E. A. Smith, 1904)
- Cocculinella coercita* (Hedley, 1907) (*Cocculina*)
(southwestern Pacific: off New South Wales and
eastern Victoria; 146–393 m; off Cape Jaffa, S. Aus-
tralia; 238 m; on fish bones) (MARSHALL 1986)
- Cocculinella kopua* Marshall, 1983
(southwestern Pacific: off North Cape, New Zea-
land; 257–327 m) (species of uncertain validity,
MARSHALL 1986)
- Cocculinella minutissima* (E. A. Smith, 1904) (*Acmaea*)
(northwestern Indian Ocean: Arabian Sea; on tele-
ost fish bones) (HASZPRUNAR 1988c)
- Cocculinella osteophila* Marshall, 1983
(southwestern Pacific: Whangaroa Harbour, New
Zealand; 13 m; on bone)
- Cocculinella salisburyensis* Ludbrook, 1956
(Pliocene, South Australia)
doubtfully referable to the genus, probably be-
longs to Lepetellidae Dall, 1882(a) or to Acmae-
idae Forbes, 1849 (MARSHALL 1983)

Family: OSTEOPELTIDAE Marshall, 1987

- Genus: *Osteopelta* Marshall, 1987
(type species: *Osteopelta mirabilis* Marshall, 1987)
- Osteopelta ceticola* Warén, 1989
(north Atlantic: off southwestern Iceland between
Vestmannaeyjar and Reykjanesridge; on whale
bone)
- Osteopelta mirabilis* Marshall, 1987
(southwestern Pacific: Challenger Plataeu, north-
east of Chatham Islands and Chatham Rise, New
Zealand; 800–955 m; on whale skulls and bones)
(HASZPRUNAR 1988c)
- Osteopelta* sp. cf. *mirabilis* Marshall, 1987 (MARSHALL
1994)
(middle Eocene, Waihao Greensand, New Zea-
land; associated with bones of fossil turtle)
- Osteopelta praeceps* Marshall, 1994
(southwestern Pacific: Chatham Rise and Chal-
lenger Plataeu, New Zealand; 372–912 m; on
whale bones)
- Family: PSEUDOCOCCULINIDAE Hickman, 1983
(the subfamiliar attribution of particular genera
may be premature according to MCLEAN 1991)
- Subfamily: Pseudococculininae Hickman, 1983
- Genus: *Pseudococculina* Schepman, 1908 (type species:
Pseudococculina rugosoplacata Schepman, 1908)
- Pseudococculina cingulata* Schepman, 1908
(Indo-Pacific: off Indonesia)
- Pseudococculina granulata* Schepman, 1908
(Indian Ocean)
- Pseudococculina gregaria* Marshall, 1986
(southwestern Pacific: off Southern New Zealand
and New South Wales; 384–891 m; on wood)
(HASZPRUNAR 1988b)
- "*Pseudococculina*" *rosea* Habe, 1952
(northwestern Pacific: off Japan)
status not confirmed by recent anatomical studies
- Pseudococculina rugosoplacata* Schepman, 1908
(eastern Indian Ocean: Sunda Sea, Indonesia,
2798 m)
- Pseudococculina subcingulata* (Kuroda et Habe, 1949)
(*Cocculina*) (Fig. 5, 6)
(northwestern Pacific: off Tosa, Shikoku; Suruga
Bay, Honshu, Japan; 140–490; on wood)
(HASEGAWA 1997)
- Pseudococculina* n. sp. (1) (MOSKALEV 1976)
- Pseudococculina* n. sp. (2) (MOSKALEV 1976)
- Pseudococculina* n. sp. (3) (MOSKALEV 1976)
- Pseudococculina* n. sp. (4) (MOSKALEV 1976)
- Pseudococculina* n. sp. (5) (MOSKALEV 1976)
- Genus: *Bandabyssia* Moskalev, 1976 (type species:
Bandabyssia costoconcentrica Moskalev, 1976)
- Bandabyssia costoconcentrica* Moskalev, 1976

(Pacific: Banda Trench; 5700 m)

Genus: *Kaiparapelta* Marshall, 1986 (type species: *Kaiparapelta singularis* Marshall, 1986) (a subgenus in *Notocrater* Finlay, 1927 according to HASZPRUNAR 1988ab)

Kaiparapelta askewi McLean et Harasewych, 1995 (northwestern Atlantic: 165 km E of Charleston, South Carolina; 194 m) (spongivorous) (WARÉN & GOFAS 1996)

Kaiparapelta singularis Marshall, 1986 (early Miocene, Pakaurangi Point, Kaipara, New Zealand)

Genus: *Kurilabyssia* Moskalev, 1976 (type species: *Kurilabyssia squamosa* Moskalev, 1976) *Kurilabyssia antipodensis* Marshall, 1986 (southwestern Pacific: off New South Wales and southern New Zealand; 823–962 m; on wood) (HASZPRUNAR 1988b)

Kurilabyssia squamosa Moskalev, 1976 (northwestern Pacific: Kurile-Kamchatka Trench; 5220 m)

Genus: *Mesopelex* Marshall, 1986 (type species: *Mesopelex zelandica* Marshall, 1986)

Mesopelex zelandica Marshall, 1986 (southwestern Pacific: off Aldermen Islands, Bay of Plenty, New Zealand; 443–872 m)

Mesopelex n. sp. (to be described by B. A. Marshall according to HASZPRUNAR 1988ab) (southwestern Pacific: off Timaru, New Zealand; 852–876 m)

Genus: *Notocrater* Finlay, 1927

(type species: *Cocculina craticulata* Suter, 1908) = *Punctolepeta* Habe, 1958

(type species: *Punctolepeta minuta* Habe, 1958)

Notocrater craticulata (Suter, 1908) (*Cocculina*) (southwestern Pacific: off Timaru and Dusky Sound, New Zealand; 37–738 m; on wood) (MARSHALL 1986)

Notocrater gracilis Marshall, 1986 (southwestern Pacific: off Hicks Bay, New Zealand, 55–73 m; in terenid tubes in wood)

Notocrater houbricki McLean et Harasewych, 1995 (western Atlantic: south of Settlement Point, Grand Bahama Island, Bahama Islands; 412 m)

Notocrater maxwelli Marshall, 1986 (early Miocene, Pakaurangi Point, Kaipara, New Zealand)

Notocrater ponderi Marshall, 1986 (southwestern Pacific: off New South Wales; 165–84 m; on wood) (HASZPRUNAR 1988b)

Notocrater pustulosa (Thiele, 1925) (*Cocculina*) (Fig. 7) = *Punctolepeta minuta* Habe, 1958

(northwestern Pacific: off Japan) (HASEGAWA 1997, MARSHALL 1986)

Notocrater pustulosa (Woodring, 1928 non Thiele, 1925) (*Cocculina*) (Miocene, Jamaica) (MCLEAN & HARASEWYCH 1995) the species should probably receive a replacement name as the name *pustulosa* appears to be preoccupied

Notocrater youngi McLean et Harasewych, 1995 (western Atlantic: off Southwest Reef, New Providence Island, Bahamas; 518 m; on palmetto fronds)

Genus: *Tentaoculus* Moskalev, 1976

(type species: *Tentaoculus perlucida* Moskalev, 1976)

Tentaoculus balantiophaga Marshall, 1996 (southwestern Pacific: off Castlepoint and western Chatham Rise, New Zealand; 1065–1335 m; on spent skate egg cases)

Tentaoculus eritmeta (Verrill, 1884) (*Puncturella /Fissurisepta/*) (western Atlantic) (MCLEAN & HARASEWYCH 1995)

Tentaoculus georgiana (Dall, 1927) (*Cocculina*) (western Atlantic: off Georgia; 805 m) (MCLEAN & HARASEWYCH 1995)

Tentaoculus haptricola Marshall, 1986 (southwestern Pacific: off Castlepoint, New Zealand; 1070–1200 m; on *Macrocystis* holdfast)

Tentaoculus lithodicola Marshall, 1986 (southwestern Pacific: off Kaikoura, New Zealand; 400 m; on dorsal surface of carapace of stone crab *Lithodes murrayi* Henderson, 1888)

Tentaoculus neolithodicola Marshall, 1986 (southwestern Pacific: off Jackson Bay, New Zealand; 1027–1041 m; on dorsal surface of carapace of stone crab *Neolithodes brodiei* Dawson et Yaldwyn, 1970) (HASZPRUNAR 1988b)

Tentaoculus perlucida Moskalev, 1976 (western Pacific: off New Guinea; 300–450 m)

Subfamily: Caymanabyssiinae Marshall, 1986

Genus: *Caymanabyssia* Moskalev, 1976

Subgenus: *Caymanabyssia* s. str. Moskalev, 1976

(type species: *Caymanabyssia spina* Moskalev, 1976) *Caymanabyssia* (*Caymanabyssia*) *rhina* Marshall, 1986 (southwestern Pacific: off White Island, New Zealand; 1075–1100 m; on wood)

Caymanabyssia (*Caymanabyssia*) *spina* Moskalev, 1976 (western Atlantic: Cayman Trench; 6740–6800 m; on wood) (MCLEAN & HARASEWYCH 1995) (western Atlantic: Puerto Rico Trench; 8595 m) (LEAL 1996)

Caymanabyssia (*Caymanabyssia*) *vandoverae* McLean, 1991 (northeastern Pacific: Escanaba Trough, Gorda Ridge; 3362 m; on wood)

Subgenus: *Dictyabyssia* McLean, 1991 (type species: *Caymanabyssia sinespina* Marshall, 1986)
Caymanabyssia (Dictyabyssia) fosteri McLean, 1991
 (East Pacific Rise 11°N; 2700 m; on wood)
Caymanabyssia (Dictyabyssia) sinespina Marshall, 1986
 (southwestern Pacific: White Island to Jackson Bay, New Zealand; 800–1147 m)
 (HASZPRUNAR 1988b)

Genus: *Amphipllica* Haszprunar, 1988(b)
 Subgenus: *Amphipllica* s. str. Haszprunar, 1988(b)
 (type species: *Amphipllica venezuelensis* McLean, 1988)
Amphipllica (Amphipllica) concentrica (Thiele, 1909)
 (*Pseudococculina*)
 (Atlantic: north of Azores) (MCLEAN 1988)
Amphipllica (Amphipllica) knudseni McLean, 1988
 (southwestern Pacific: Tasman Basin, New Zealand; 3610 m) (HASZPRUNAR 1988b)
Amphipllica (Amphipllica) venezuelensis McLean, 1988
 (western Atlantic: Venezuelan Basin; 3476–5057 m) (HASZPRUNAR 1988b)
Amphipllica n. sp. (LEAL 1996)
 (western Atlantic: Puerto Rico Trench; 8595 m)

Subgenus: *Gordabyssia* McLean, 1991 (type species: *Amphipllica (Gordabyssia) gordensis* McLean, 1991)
Amphipllica (Gordabyssia) gordensis McLean, 1991
 (northeastern Pacific: Escanaba Trough, Gorda Ridge; 3305 m; on sulfide crust)

Genus: *Colotrachelus* Marshall, 1986 (type species: *Colotrachelus hestica* Marshall, 1986)
Colotrachelus hestica Marshall, 1986
 (southwestern Pacific: off Castlepoint and off Kaikoura, New Zealand; 1174–1723 m; on wood)
 (HASZPRUNAR 1988b)

Genus: *Copulabyssia* Haszprunar, 1988(b)
 (type species: *Cocculina corrugata* Jeffreys, 1883)
Copulabyssia corrugata (Jeffreys, 1883/c/) (*Cocculina*)
 (northeastern Atlantic; Tyrrhenian Sea; 100–1778 m; from submerged wood)
 (DI GERONIMO & BELLAGAMBA 1985, HASZPRUNAR 1988b, NORDSIECK 1973, WARÉN 1991)
Copulabyssia gradata (Marshall, 1986) (*Pseudococculina*)
 (southwestern Pacific: White Island and East Cape, New Zealand; 1075–1280 m; on wood)
 (HASZPRUNAR 1988b)
Copulabyssia leptalea (Verrill, 1884) (*Cocculina*)
 (northern Atlantic: Iceland, north of the Hebrides; from wood bored by shipworms) (MCLEAN & HARASEWYCH 1995)
Copulabyssia similaris Hasegawa, 1997 (Fig. 8)

(northwestern Pacific: Suruga Bay, Honshu, Japan; 180–740 m; on wood)

Genus: *Punctabyssia* McLean, 1991
 (subfamiliar status unclear)
 (type species: *Punctabyssia tibbetti* McLean, 1991)
Punctabyssia tibbetti McLean, 1991
 (East Pacific Rise 11°N; 2700 m; on wood)

Genus: *Yaquinabyssia* Haszprunar, 1988(b)
 (type species: *Yaquinabyssia careyi* McLean, 1988)
Yaquinabyssia careyi McLean, 1988
 (northeastern Pacific: Cascadia Abyssal Plain, 171 km west of Cape Foulweather, Oregon; 2774 m)
 (HASZPRUNAR 1988b)

Family: PYROPELTIDAE McLean et Haszprunar, 1987

Genus: *Pyropelta* McLean et Haszprunar, 1987 (type species: *Pyropelta musaica* McLean et Haszprunar, 1987)
Pyropelta bohlei Beck, 1996
 (western Pacific: Edison Seamount, off Lihir Island; 1483 m; hydrothermal vents, on shell of *Bathyacmaea jonassoni* Beck, 1996)
Pyropelta corymba McLean et Haszprunar, 1987
 (northeastern Pacific: Guaymas Basin; 2022 m; hydrothermal vents)
 (northeastern Pacific: Santa Barbara Basin; 1240 m and Monterey Bay, off Point Sur, California; 940 m; on whale bone or skull) (MCLEAN 1992a)
Pyropelta musaica McLean et Haszprunar, 1987
 (northeastern Pacific: Axial Seamount, Juan de Fuca Ridge; 1575 m; hydrothermal vents)
 (northeastern Pacific; 940–1400 m; on whale skulls) (MCLEAN 1992a)
Pyropelta wakefieldi McLean, 1992(a)
 (northeastern Pacific: Monterey Bay, off Point Sur, California; 940 m; on whale skull)

ACKNOWLEDGEMENTS:

I would like to thank Dr. BRUCE MARSHALL (Museum Te Papa Tongarewa, Wellington NZ), Dr. JAMES H. MCLEAN (Museum of Natural History, Los Angeles) and Dr. ANDREW MCARTHUR (Smithsonian Institution, Washington) for their kind remarks that helped me in the preparation of this list. Dr. KAZUNORI HASEGAWA (National Science Museum, Tsukuba) kindly supplied me with the photographs of cocculiniform gastropods. I am also indebted to Mrs. JOLANTA MAĆKOWIAK for her help in searching for bibliographical sources in libraries.
